

# NATIVE EREMOPHILA'S

Kalbarri Carpet

Pink Pantha

Nivea Spring Mist

Maculata Red

Amber Carpet

These resilient and drought-tolerant shrubs are native to Australia, where they thrive in arid and semi-arid regions. Eremophilas are renowned for their ability to adapt to harsh environmental conditions, displaying a diverse range of forms, from low-lying ground covers to tall shrubs. The plants are characterized by their small, tubular flowers that come in various colors, including shades of purple, pink, and red. The foliage is often aromatic, and some species are known for their traditional medicinal uses among Indigenous Australian communities. Gardeners appreciate Eremophilas for their unique appearance, hardiness, and ability to attract pollinators, making them a fascinating and ecologically valuable addition to both natural landscapes and cultivated gardens.
